ACADEMIC UNIT OF ELECTRICAL ENGINEERING

ACADEMIC PROGRAM OF SOFTWARE ENGINEERING

DATABASE SYSTEMS LABORATORY II PRACTICE 8
-RESTRICTING AND SORTING DATA

PROFESSOR:
ALDONSO BECERRA SÁNCHEZ

STUDENT:
DANIEL ALEJANDRO MORALES CASTILLO

1 Introduction

SQL language allows the realization of projection and selection of data to satisfy the needs of reports that may be required for a programmer, developer or end user.

In the week of theory class we saw some interesting topics in chapter 2, they were all about data queries but in a more complex but at the same time effective way, we already used some search parameters and complex sentences, we can do calculations, search with specific strings among other things.

2 Development

Activity 1

Write the section that describes the work developed in the following activities. Read all the choices carefully because there might be more than one correct answer. Choose all the correct answers for each question. Explain the reason for your answer.

LIMIT THE ROWS RETRIEVED BY A QUERY

1. Which two clauses of the SELECT statement facilitate selection and projection?

- A. SELECT, FROM
- B. ORDER BY, WHERE
- C. SELECT, WHERE
- D. SELECT, ORDER BY

Answer: A, C

The letter A because that is the basic form to retrieve all the columns and you also can specify which columns you want to see and that is projection, the letter C because you need to use a WHERE in a SELECT statement to filter rows and that is selection.

2. Choose the query that extracts the LASTNAME, JOBID, and SALARY values from the EMPLOYEES table for records having JOBID values of either SAREP or MKMAN and having SALARY values in the range of 1000to4000. The SELECT and FROM clauses are SELECT LASTNAME, JOBID, SALARY FROM EMPLOYEES:

- A. WHERE JOBID IN ('SAREP','MKMAN') AND SALARY < 1000 AND SALARY > 4000;
- B. WHERE JOBID IN ('SAREP','MKMAN') AND SALARY BETWEEN 1000 AND 4000;
- C. WHERE JOBID LIKE 'SAREP' AND SALARY > 4000;
- D. WHERE JOBID = 'SAREP' AND SALARY BETWEEN 1000 AND 4000 OR JOBID='MKMAN';

Answer: B

There are more statements that can do it but the letter B is the most complete, the letter B statement retrieve all the records with a job id 'SA REP' or 'MK MAN' and with a salary between 1000 and 4000 (1000 and 4000 also are included).

3. Which of the following WHERE clauses contains an error? The SELECT and FROM clauses are SELECT * FROM EMPLOYEES:

- A. WHERE HIREDATE IN ('02-JUN-2004');
- B. WHERE SALARY IN ('1000','4000','2000');
- C. WHERE JOBID IN (SAREP,MKMAN);
- D. WHERE COMMISSIONPCT BETWEEN 0.1 AND 0.5;

Answer: A and C

The letter B contains an error because you need to use simple quotation marks with the job id, the letter A depends on the date format, you need to use your system format or specify format.

4. Choose the WHERE clause that extracts the DEPARTMENT-NAME values containing the character literal "er" from the DEPARTMENTS table. The SELECT and FROM clauses are SELECT DEPARTMENTNAME FROM DEPARTMENTS:

- A. WHERE DEPARTMENT NAME IN ('
- B. WHERE DEPARTMENT NAME LIKE "
- C. WHERE DEPARTMENT NAME BETWEEN 'e' AND 'r';
- D. WHERE DEPARTMENT NAME CONTAINS "e

Answer: B

The letter B statement means select the department names that have "er" like sub-string in the department name, it can have 0 or more characters before the "er" and it can have 0 or more characters after the "er"

5. Which two of the following conditions are equivalent to each other?

- A. WHERE COMMISSIONPCT IS NULL
- B. WHERE COMMISSIONPCT = NULL
- C. WHERE COMMISSIONPCT IN (NULL)
- D. WHERE NOT(COMMISSIONPCT IS NOT NULL)

Answer: B, C

These two statements retrieve an empty table, use IN it is like use "=" but also OR because you can write one or more parameters.

6. Which three of the following conditions are equivalent to each other?

- A. WHERE SALARY >=5000 AND SALARY <=2000
- B. WHERE SALARY IN (2000,3000,4000,5000)
- C. WHERE SALARY BETWEEN 2000 AND 5000
- D. WHERE SALARY < 1999 AND SALARY > 5001
- E. WHERE SALARY <=2000 AND >=5000

Answer: A, C, D

When you use BETWEEN it is like use <= and >= because the limits are included too, so I selected all the statements that include all the values between 2000 and 5000 (2000 and 5000 are included too).

SORT THE ROWS RETRIEVED BY A QUERY

7. Choose one false statement about the ORDER BY clause.

- A. When using the ORDER BY clause, it always appears as the last clause in a SELECT statement.
- B. The ORDER BY clause may appear in a SELECT statement that does not contain a WHERE clause.
- C. The ORDER BY clause specifies one or more terms by which the retrieved rows are sorted. These terms can only be column names.
- D. Positional sorting is accomplished by specifying the numeric position of a column as it appears in the SELECT list, in the ORDER BY clause

Answer: C

The terms that you specify in the order by can be also ALIAS not only column names.

8. The following query retrieves the LASTNAME, SALARY, and COMMISSIONPCT values for employees whose LASTNAME begins with the letter R. Based on the following query, choose the ORDER BY clause that first sorts the results by the COMMISSIONPCT column, listing highest commission earners first, and then sorts the results in ascending order by the SALARY column. Any records with NULL COMMISSIONPCT must appear last: SELECT LASTNAME, SALARY, COMMISSIONPCT FROM EMPLOYEES WHERE LASTNAME LIKE 'R'

- A. ORDER BY COMMISSIONPCT DESC, 2;
- B. ORDER BY 3 DESC, 2 ASC NULLS LAST;
- C. ORDER BY 3 DESC NULLS LAST, 2 ASC;
- D. ORDER BY COMMISSIONPCT DESC, SALARY ASC;

Answer: D, B

The letter D statement order by commission first in descendent way and later order by salary in ascended way, the letter B do the same just it is wrote differently.

AMPERSAND SUBSTITUTION

9. The **DEFINE** command explicitly declares a session-persistent substitution variable with a specific value. How is this variable referenced in an **SQL** statement? Consider an expression that calculates tax on an employee's **SALARY** based on the current tax rate. For the following session-persistent substitution variable, which statement correctly references the **TAXRATE** variable? **DEFINE TAXRATE=0.14**

- A. **SELECT SALARY * :TAXRATE TAX FROM EMPLOYEES;**
- B. **SELECT SALARY * TAXRATE TAX FROM EMPLOYEES;**
- C. **SELECT SALARY * :TAX TAX FROM EMPLOYEES;**
- D. **SELECT SALARY * TAXRATE TAX FROM EMPLOYEES;**

Answer:B

Following the knowledge learned in theory class the correct form to reference a session-persistent substitution variable is using `variableName`, that is why i chose the letter B.

10. When using ampersand substitution variables in the following query, how many times will you be prompted to input a value for the variable called **JOB** the first time this query is executed? **SELECT FIRSTNAME, 'JOB' FROM EMPLOYEES WHERE JOBID LIKE 'AND 'JOB' BETWEEN 'A' AND 'Z';**

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

When you use the simple ampersand it is only to do a substitution but the variable is not permanent until you define it, that is why every time it is asked to you to input something, because you are not defined a persistent variable yet.

Activity 2:

Propose an answer to the following issues:

a) The `SELECT` list of a query contains a single column. Is it possible to sort the results retrieved by this query by another column? Yes, the results can

be sorted by another column, for example, you can query only the employee id from employees table and sort it by the salary using `ORDER BY SALARY`, the `SALARY` column is not showed but it exist;

b) Ampersand substitution variables support reusability of repetitively executed SQL statements. If a substituted value is to be used multiple times at different parts of the same statement, is it possible to be prompted to submit a substitution value just once and for that value to automatically be substituted during subsequent references to the same variable?

Yes, using the double ampersand only one time for a variable and when you need to use the same value you only use a simple ampersand with the same name and it will be replaced with the value of the first substitution, that is because the double ampersand created an persistent variable

c) You have been tasked to retrieve the `LASTNAME` and `DEPARTMENTID` values for all rows in the `EMPLOYEES` table. The output must be sorted by the nullable `DEPARTMENTID` column, and all rows with `NULL DEPARTMENTID` values must be listed last. Is it possible to provide the results as requested?

Yes, it is simple, you can use the `ORDER BY` and the `DESC` option, that will sort and the null values will be first because `NULL` is not a value to order and are putted last, but it is a descendent sort that is why the null values are first.

d) You have a complex query with multiple conditions. Is there a restriction on the number of conditions you can specify in the `WHERE` clause? Is there a limit to the number of comparison operators you can use in a single query?

I do not know, i think there is a limit because the memory and the capacity of the work sheets are not infinite, but i do not know the limits, maybe the limit is the memory to process the query.

e) You have been tasked to locate rows in the `EMPLOYEES` table where the `SALARY` values contain the numbers 8 and 0 adjacent to each other. The `SALARY` column has a `NUMBER` data type. Is it possible to use the `LIKE`

comparison operator with numeric data?

No, in the theory class we learned about the LIKE clause, and LIKE is used by strings to find sub strings.

f) By restricting the rows returned from the JOBS table to those which contain the value SAREP in the JOBID column, is a projection, selection or join performed?

It is a selection because you are restricting the rows, if you will only show the column JOB ID it also is a projection because you are restricting the columns.

Activity 3:

Connect to the OE schema and complete the following tasks. A customer requires a hard disk drive and a graphics card for her personal computer. She is willing to spend between 500 and 800 on the disk drive but is unsure about the cost of a graphics card. Her only requirement is that the resolution supported by the graphics card should be either 1024×768 or 1280×1024. As the sales representative, you have been tasked to write one query that searches the PRODUCTINFORMATION table where the PRODUCTNAME value begins with HD (hard disk) or GP (graphics processor) and their list prices. Remember the hard disk list prices must be between 500 and 800 and the graphics processors need to support either 1024×768 or 1280×1024. Sort the results in descending LISTPRICE order.

NOTE: Capture an image for each statement output.

The screenshot shows the Oracle SQL Developer interface. The main window displays a query in the 'Hoja de Trabajo' (Worksheet) tab. The query is as follows:

```
SELECT PRODUCT_NAME, LIST_PRICE FROM PRODUCT_INFORMATION;

SELECT PRODUCT_NAME, LIST_PRICE FROM PRODUCT_INFORMATION
WHERE (((PRODUCT_NAME LIKE 'HDA') AND (LIST_PRICE BETWEEN 500 AND 800)) OR ((PRODUCT_NAME LIKE 'GPA') AND ((PRODUCT_NAME LIKE '1024X768' OR PRODUCT_NAME LIKE '1280X1024'))))
ORDER BY LIST_PRICE DESC;
```

The results of the query are displayed in the 'Resultado de la Consulta' (Query Result) tab. The results are as follows:

PRODUCT_NAME	LIST_PRICE
1 HD 18,200 R10000 /E	800
2 HD 12GB R1200 /ZE	775
3 HD 12GB /S	633
4 HD 12GB /R	612
5 HD 12GB /H	567
6 HD 12GB /I	543

The right-hand pane shows the 'Conexiones' (Connections) window, which lists various database connections. The 'OE' connection is selected, and the 'Tableas (Filtrado)' (Filtered Tables) list is visible, showing a list of tables and views.

Hoja de Trabajo | Generador de Consultas

```

SELECT DEPARTMENT_NAME FROM DEPARTMENTS WHERE DEPARTMENT_NAME LIKE 'ing';

SELECT JOB_TITLE, MIN_SALARY, MAX_SALARY, (MAX_SALARY - MIN_SALARY) AS "VARIANCE"
FROM JOBS WHERE JOB_TITLE LIKE '%President' OR JOB_TITLE LIKE '%Manager' ORDER BY
"VARIANCE" DESC, JOB_TITLE DESC;

```

Resultado de la Consulta

Activity 4:

This exercise must be performed using HR schema.

- Retrieve a list of DEPARTMENTNAME values that end with the three letters “ing” from the DEPARTMENTS table.

The screenshot shows a SQL IDE with two tabs: 'lab_8_01.sql' and 'ACT5.sql'. The 'lab_8_01.sql' tab is active, displaying a SQL query in the 'Hoja de Trabajo' (Worksheet) pane. The query is:

```
SELECT DEPARTMENT_NAME FROM DEPARTMENTS WHERE DEPARTMENT_NAME LIKE '%ing';
```

The 'Resultado de la Consulta' (Query Result) pane shows the results of the query. It displays a table with one column, 'DEPARTMENT_NAME', and seven rows of data:

DEPARTMENT_NAME
1 Marketing
2 Purchasing
3 Shipping
4 Accounting
5 Manufacturing
6 Contracting
7 Recruiting

- The JOBS table contains descriptions of different types of jobs an employee in the organization may occupy. It contains the JOBID, JOBTITLE, MINSALARY, and MAXSALARY columns. You are required to write a query that extracts the JOBTITLE, MINSALARY, and MAXSALARY columns, as well as an expression called VARIANCE, which is the difference between the MAXSALARY and MINSALARY values, for each row. The results must include only JOBTITLE values that contain either the word “President” or “Manager.” Sort the list in descending order based on the VARIANCE expression. If more than one row has the same VARIANCE value, then, in addition, sort these rows by JOBTITLE in reverse alphabetic order.

The screenshot shows an SQL IDE with a query editor and a results pane. The query editor contains the following SQL code:

```
SELECT DEPARTMENT_NAME FROM DEPARTMENTS WHERE DEPARTMENT_NAME LIKE '%ing';

SELECT JOB_TITLE, MIN_SALARY, MAX_SALARY, (MAX_SALARY - MIN_SALARY)
AS "VARIANCE"
FROM JOBS WHERE JOB_TITLE LIKE '%President%' OR JOB_TITLE LIKE '%Manager%' ORDER BY
"VARIANCE" DESC, JOB_TITLE DESC;
```

The results pane shows the output of the query, displaying 8 rows of data. The columns are JOB_TITLE, MIN_SALARY, MAX_SALARY, and VARIANCE. The results are sorted by VARIANCE in descending order, and then by JOB_TITLE in reverse alphabetic order for rows with the same VARIANCE value.

JOB_TITLE	MIN_SALARY	MAX_SALARY	VARIANCE
1 President	20080	40000	19920
2 Administration Vice President	15000	30000	15000
3 Sales Manager	10000	20080	10080
4 Finance Manager	8200	16000	7800
5 Accounting Manager	8200	16000	7800
6 Purchasing Manager	8000	15000	7000
7 Marketing Manager	9000	15000	6000
8 Stock Manager	5500	8500	3000

- A common calculation performed by the Human Resources department relates to the calculation of taxes levied upon an employee. Although, this is done for all employees, there are always a few staff members who dispute the tax deducted from their income. The tax deducted per employee is calculated by obtaining the annual salary for the employee and multiplying this by the current tax rate, which may vary from year to year. You are required to write a reusable query using the current tax rate and the EMPLOYEEID number as inputs and return the EMPLOYEEID, FIRSTNAME, SALARY, ANNUAL SALARY (SALARY * 12), TAXRATE, and TAX (TAXRATE * ANNUAL SALARY) information.

SELECT * FROM EMPLOYEES;	
SELECT EMPLOYEE_ID, FIRST_NAME, SALARY, (SALARY*12) AS "ANNUAL SALARY", &TAX_RATE AS "TAX RATE", (&TAX_RATE*SALARY*12) AS TAX FROM EMPLOYEES WHERE EMPLOYEE_ID = &EMPLOYEE_ID;	
UNDEFINE TAX_RATE;	

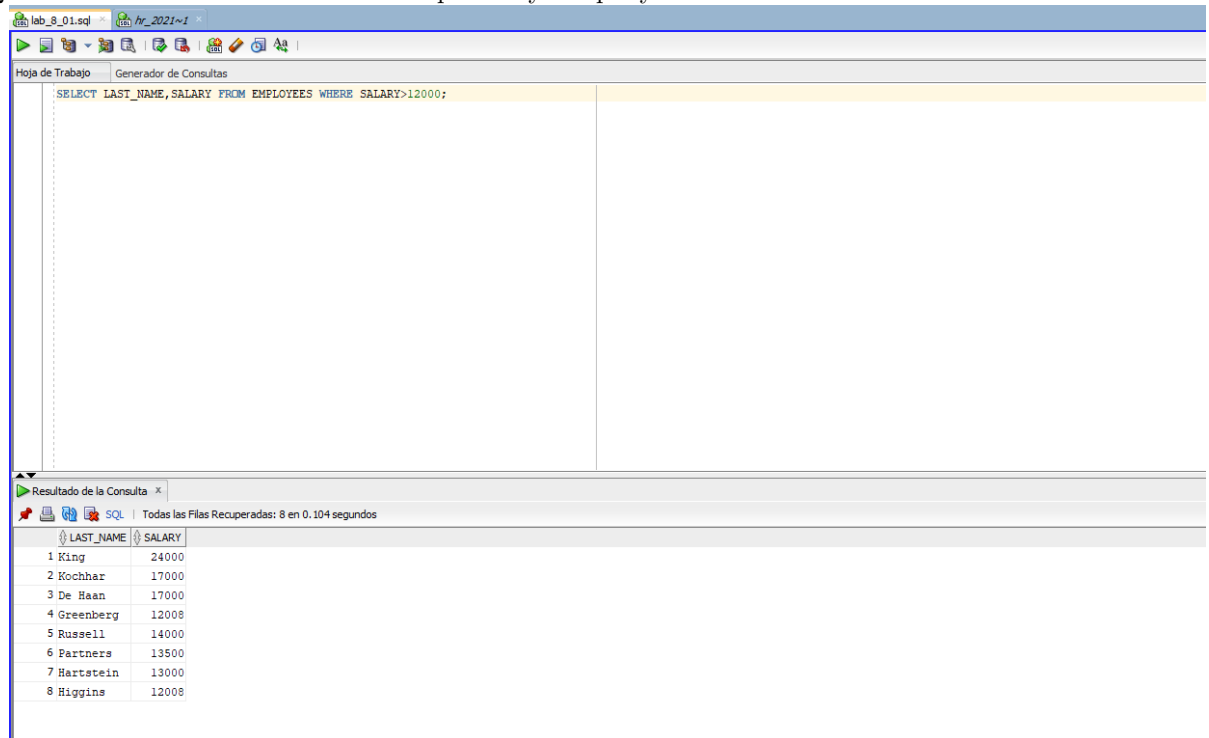

Resultado de la Consulta x Salida de Script x					
SQL Todas las Filas Recuperadas: 1 en 0.003 segundos					
EMPLOYEE_ID	FIRST_NAME	SALARY	ANNUAL SALARY	TAX RATE	TAX
1	160 Louise	7500	90000	0.02	1800

Activity 5:

In this practice, you build more reports, including statements that use the **WHERE** clause and the **ORDER BY** clause. You make the **SQL** statements more reusable and generic by including the ampersand substitution

The HR department needs your assistance in creating some queries

1. Because of budget issues, the HR department needs a report that displays the last name and salary of employees who earn more than 12,000. Save your **SQL** statement as a file named lab801.sql. Run your query.

The screenshot shows an SQL IDE window with a file named 'lab_8_01.sql' open. The query editor contains the following SQL statement:

```
SELECT LAST_NAME, SALARY FROM EMPLOYEES WHERE SALARY > 12000;
```

Below the query editor, the 'Resultado de la Consulta' (Query Result) tab is active, displaying the results of the query. The results are shown in a table with two columns: 'LAST_NAME' and 'SALARY'. The table contains 8 rows of data, sorted by salary in descending order.

	LAST_NAME	SALARY
1	King	24000
2	Kochhar	17000
3	De Haan	17000
4	Greenberg	12008
5	Russell	14000
6	Partners	13500
7	Hartstein	13000
8	Higgins	12008

2. Open a new SQL Worksheet. Create a report that displays the last name and department number for employee number 176. Run the query.

The screenshot shows an SQL Worksheet application with two tabs: 'lab_8_01.sql' and 'hr_2021~1'. The 'Generador de Consultas' (Query Generator) tab is active, displaying the following SQL query:

```
SELECT LAST_NAME, DEPARTMENT_ID FROM EMPLOYEES WHERE EMPLOYEE_ID = 176;
```

Below the query editor, the 'Resultado de la Consulta' (Query Result) tab is active, showing the results of the query. The status bar indicates 'Todas las Filas Recuperadas: 1 en 0.004 segundos' (All rows recovered: 1 in 0.004 seconds). The results are displayed in a table with two columns: 'LAST_NAME' and 'DEPARTMENT_ID'.

LAST_NAME	DEPARTMENT_ID
1 Taylor	80

3. The HR department needs to find high-salary and low-salary employees. Modify lab801.sql to display the last name and salary for any employee whose salary is not in the range of 5,000 to 12,000. Save your SQL statement as lab803.sql.

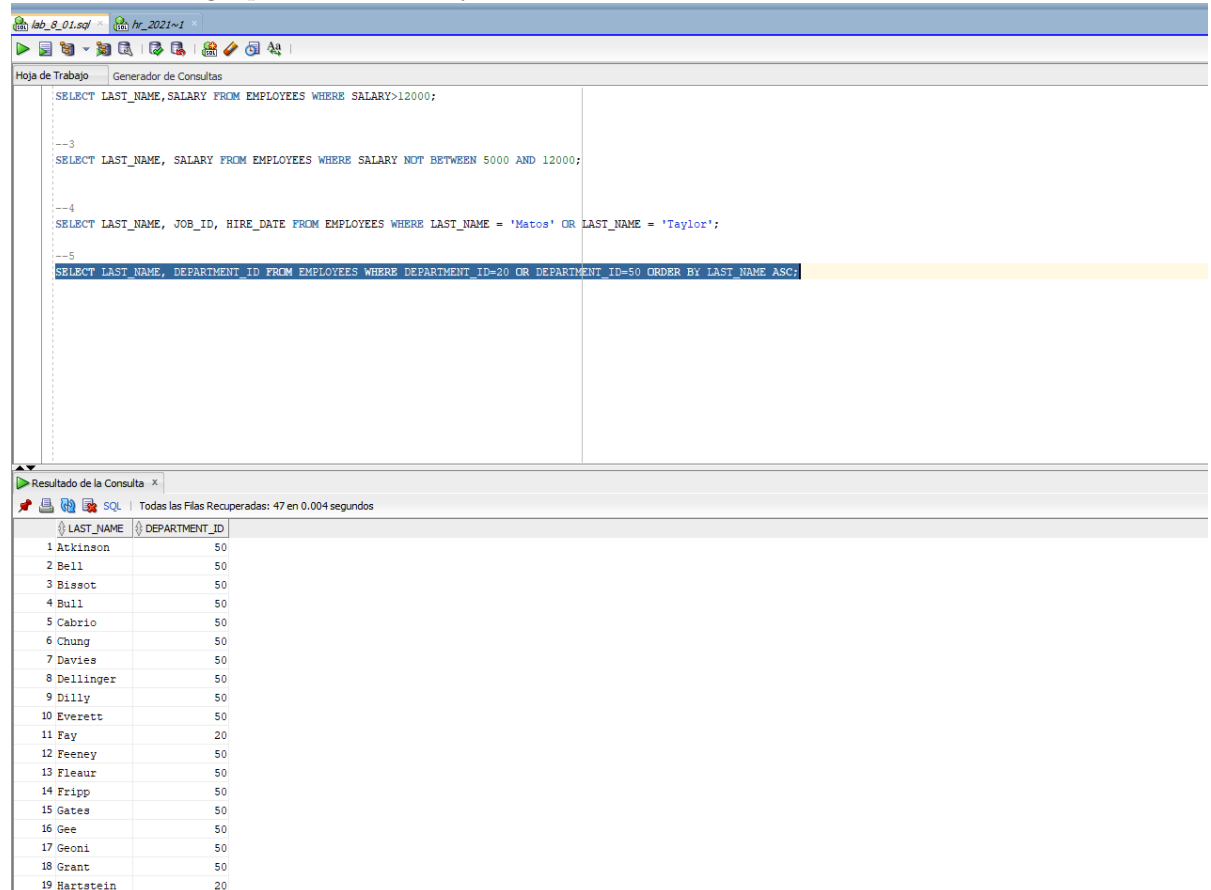

The screenshot shows the Oracle SQL Developer interface. The top pane, titled 'Generador de Consultas', contains the following SQL query:

```
--3
SELECT LAST_NAME, SALARY FROM EMPLOYEES WHERE SALARY NOT BETWEEN 5000 AND 12000;
```

The bottom pane, titled 'Resultado de la Consulta', shows the results of the query. It indicates that 50 rows were retrieved in 0.007 seconds. The results are displayed in a table with two columns: LAST_NAME and SALARY.

	LAST_NAME	SALARY
1	King	24000
2	Kochhar	17000
3	De Haan	17000
4	Austin	4800
5	Pataballa	4800
6	Lorentz	4200
7	Greenberg	12008
8	Khoo	3100
9	Baida	2900
10	Tobias	2800
11	Himuro	2600
12	Colmenares	2500
13	Nayer	3200
14	Mikkilineni	2700
15	Landry	2400
16	Markle	2200
17	Bissot	3300
18	Atkinson	2800
19	Marlow	2500

5. Display the last name and department ID of all employees in departments 20 or 50 in ascending alphabetical order by name

The screenshot shows the Oracle SQL Developer interface. The top pane, titled 'Hoja de Trabajo' and 'Generador de Consultas', contains the following SQL query:

```
--3
SELECT LAST_NAME, SALARY FROM EMPLOYEES WHERE SALARY > 12000;

--4
SELECT LAST_NAME, SALARY FROM EMPLOYEES WHERE SALARY NOT BETWEEN 5000 AND 12000;

--5
SELECT LAST_NAME, JOB_ID, HIRE_DATE FROM EMPLOYEES WHERE LAST_NAME = 'Matos' OR LAST_NAME = 'Taylor';

--6
SELECT LAST_NAME, DEPARTMENT_ID FROM EMPLOYEES WHERE DEPARTMENT_ID=20 OR DEPARTMENT_ID=50 ORDER BY LAST_NAME ASC;
```

The bottom pane, titled 'Resultado de la Consulta', shows the results of the query. It indicates that 47 rows were recovered in 0.004 seconds. The results are displayed in a table with two columns: LAST_NAME and DEPARTMENT_ID.

	LAST_NAME	DEPARTMENT_ID
1	Atkinson	50
2	Bell	50
3	Bissot	50
4	Bull	50
5	Cabrio	50
6	Chung	50
7	Davies	50
8	Dellinger	50
9	Dilly	50
10	Everett	50
11	Fay	20
12	Feeney	50
13	Fleaur	50
14	Fripp	50
15	Gates	50
16	Gee	50
17	Geoni	50
18	Grant	50
19	Hartstein	20

6. Modify lab1303.sql to display the last name and salary of employees who earn between 5,000 and 12,000, and are in department 20 or 50. Label the columns Employee and Monthly Salary, respectively. Resave lab1303.sql as lab1306.sql. Run the statement in lab806.sql.

```
--6
SELECT LAST_NAME AS "EMPLOYEE", SALARY AS "MONTHLY SALARY" FROM EMPLOYEES
WHERE (SALARY BETWEEN 5000 AND 12000) AND (DEPARTMENT_ID=20 OR DEPARTMENT_ID=50);
```

Resultado de la Consulta x

Todas las Filas Recuperadas: 6 en 0.003 segundos

	EMPLOYEE	MONTHLY SALARY
1	Weiss	8000
2	Fripp	8200
3	Kaufling	7900
4	Vollman	6500
5	Mourgos	5800
6	Fay	6000

7. The HR department needs a report that displays the last name and hire date for all employees who were hired in 1994.

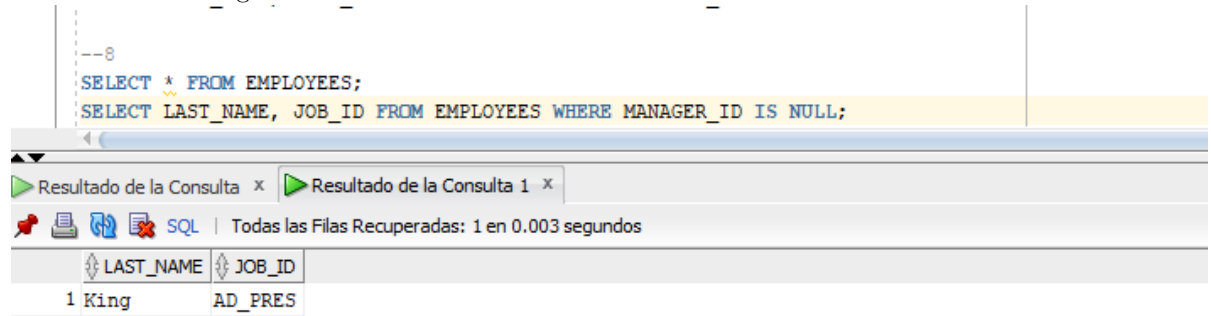

```
--7
SELECT * FROM EMPLOYEES;
SELECT LAST_NAME, HIRE_DATE FROM EMPLOYEES WHERE HIRE_DATE = '07/06/94';
```

Resultado de la Consulta x Resultado de la Consulta 1 x

Todas las Filas Recuperadas: 0 en 0.001 segundos

LAST_NAME	HIRE_DATE
-----------	-----------

8. Create a report to display the last name and job title of all employees who do not have manager.

```
--8
SELECT * FROM EMPLOYEES;
SELECT LAST_NAME, JOB_ID FROM EMPLOYEES WHERE MANAGER_ID IS NULL;
```

LAST_NAME	JOB_ID
1 King	AD_PRES

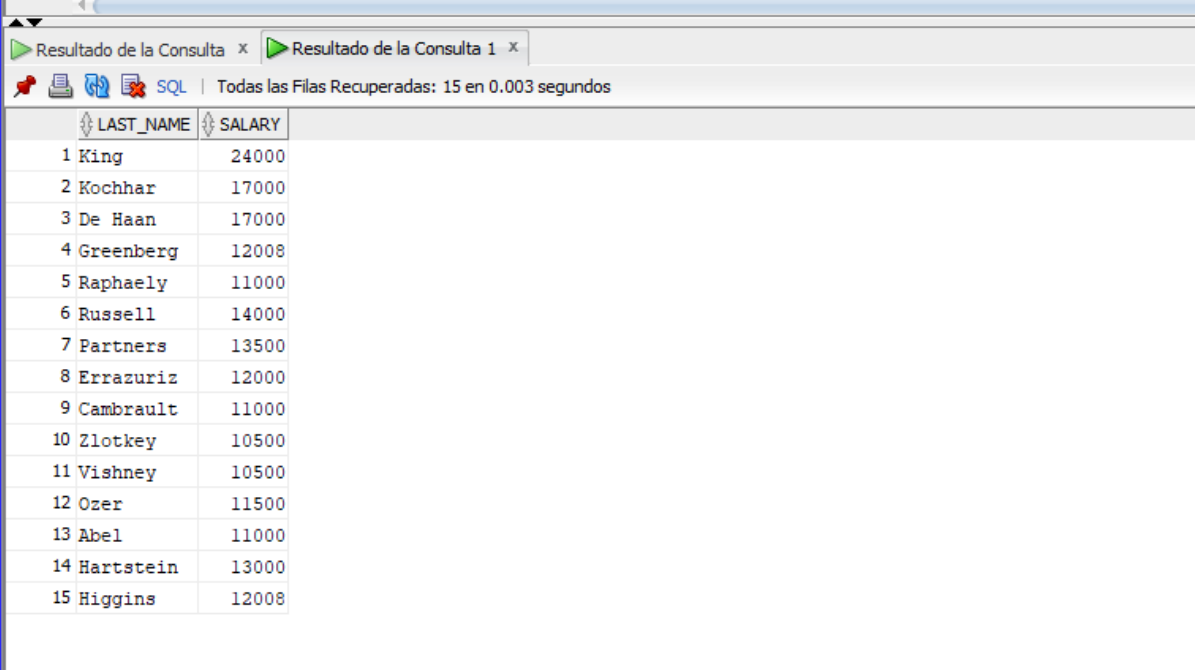

9. Create a report to display the last name, salary, and commission of all employees who earn commissions. Sort data in descending order of salary and commissions. Use the column's numeric position in the ORDERBY clause

```
--9
SELECT LAST_NAME, SALARY, COMMISSION_PCT FROM EMPLOYEES ORDER BY SALARY DESC, COMMISSION_PCT DESC;
```

LAST_NAME	SALARY	COMMISSION_PCT
1 King	24000	(null)
2 Kochhar	17000	(null)
3 De Haan	17000	(null)
4 Russell	14000	0.4
5 Partners	13500	0.3
6 Hartstein	13000	(null)
7 Greenberg	12008	(null)
8 Higgins	12008	(null)
9 Errazuriz	12000	0.3
10 Ozer	11500	0.25
11 Raphaely	11000	(null)
12 Cambrault	11000	0.3
13 Abel	11000	0.3
14 Vishney	10500	0.25
15 Zlotkey	10500	0.2
16 Baer	10000	(null)
17 King	10000	0.35
18 Tucker	10000	0.3
19 Bloom	10000	0.2

10. Members of the HR department want to have more flexibility with the queries that you are writing. They would like a report that displays the last name and salary of employees who earn more than an amount that the user specifies after a prompt. Save this query to a file named lab810.sql. If you enter 12000 when prompted, the report displays the following results:

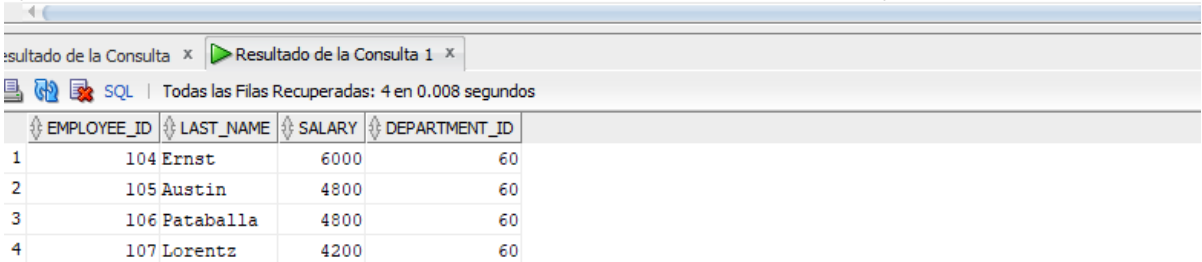

```
--10
SELECT LAST_NAME, SALARY FROM EMPLOYEES WHERE SALARY > &SALARIOPORTECLADO;
```

	LAST_NAME	SALARY
1	King	24000
2	Kochhar	17000
3	De Haan	17000
4	Greenberg	12008
5	Raphaely	11000
6	Russell	14000
7	Partners	13500
8	Errazuriz	12000
9	Cambrault	11000
10	Zlotkey	10500
11	Vishney	10500
12	Ozer	11500
13	Abel	11000
14	Hartstein	13000
15	Higgins	12008

11. The HR department wants to run reports based on a manager. Create a query that prompts the user for a manager ID and generates the employee ID, last name, salary, and department for that manager's employees. The HR department wants the ability to sort the report on a selected column. You can test the data with the following values: managerid = 103, sorted by lastname:

```
--11
SELECT EMPLOYEE_ID, LAST_NAME, SALARY, DEPARTMENT_ID FROM EMPLOYEES WHERE MANAGER_ID = &INTRODUCCIRMANAGER;
```

EMPLOYEE_ID	LAST_NAME	SALARY	DEPARTMENT_ID
104	Ernst	6000	60
105	Austin	4800	60
106	Pataballa	4800	60
107	Lorentz	4200	60

managerid = 201, sorted by salary:

```
SELECT LAST_NAME, SALARY FROM EMPLOYEES WHERE SALARY > &SALARIOFORTECIADO;

--11
SELECT EMPLOYEE_ID, LAST_NAME, SALARY, DEPARTMENT_ID FROM EMPLOYEES WHERE MANAGER_ID = &INTRODUCCIRMANAGER;
```

	LAST_NAME
1	Grant
2	Grant
3	Whalen

13. Display the last names of all employees who have both an “a” and an “e” in their last name.

The screenshot shows a SQL query execution window. The query is: `SELECT LAST_NAME FROM EMPLOYEES WHERE LAST_NAME LIKE '%a%' AND LAST_NAME LIKE '%e%';`. The results are displayed in a table with 17 rows. The table has a single column labeled `LAST_NAME`. The results are as follows:

	LAST_NAME
1	Baer
2	Bates
3	Colmenares
4	Davies
5	De Haan
6	Faviet
7	Fleaur
8	Gates
9	Hartstein
10	Markle
11	Nayer
12	Partners
13	Patel
14	Philtanker
15	Raphaely
16	Sewall
17	Whalen

14. Display the last name, job, and salary for all employees whose jobs are either those of a sales representative or of a stock clerk, and whose salaries are not equal to 2,500, 3,500, or 7,000

```
--14
SELECT * FROM EMPLOYEES;
SELECT LAST_NAME, JOB_ID, SALARY FROM EMPLOYEES WHERE (JOB_ID = 'SA_REP' OR JOB_ID='ST_CLERK')
AND (SALARY <> 2500 OR SALARY <> 3500 OR SALARY <> 7000);
```

Resultado de la Consulta x			Resultado de la Consulta 1 x		
SQL Todas las Filas Recuperadas: 50 en 0.004 segundos					
	LAST_NAME	JOB_ID	SALARY		
6	Atkinson	ST_CLERK	2800		
7	Marlow	ST_CLERK	2500		
8	Olson	ST_CLERK	2100		
9	Mallin	ST_CLERK	3300

24	Olsen	SA_REP	8000		

15. Modify lab806.sql to display the last name, salary, and commission for all employees whose commission is 20percent. Resave lab806.sql as lab815.sql. Rerun the statement in lab815.sql.

The screenshot shows a SQL IDE interface. At the top, a SQL query is entered in a text area:

```
--15  
  
SELECT LAST_NAME, SALARY, COMMISSION_PCT FROM EMPLOYEES WHERE COMMISSION_PCT = 0.2;
```

Below the query area, there are two tabs labeled "Resultado de la Consulta x". The first tab is active and displays the results of the query. The status bar indicates "Todas las Filas Recuperadas: 7 en 0.003 segundos".

	LAST_NAME	SALARY	COMMISSION_PCT
1	Zlotkey	10500	0.2
2	Olsen	8000	0.2
3	Cambrault	7500	0.2
4	Bloom	10000	0.2
5	Fox	9600	0.2
6	Taylor	8600	0.2
7	Livingston	8400	0.2

3 PRE-EVALUATION

Practices pre-Assessment for Database Systems Laboratory II Pre-Assessment
PRACTICE 8 carried out by student

1 COMPLIES WITH THE REQUESTED FUNCTIONALITY
YES

4 HAS THE CORRECT INDENTATION
YES

6 HAS AN EASY WAY TO ACCESS THE PROVIDED FILES
YES

7 HAS A REPORT WITH IDC FORMAT
YES

8 REPORT INFORMATION IS FREE OF SPELLING ERRORS
YES

9 DELIVERED IN TIME AND FORM
YES

10 IS FULLY COMPLETED (SPECIFY THE PERCENTAGE COMPLETED)
YES, 100 percent

4 Conclusion

This practice seemed very interesting to me, at the same time it was very helpful since I was able to improve some things that I did not master, I like to create sentences of this type since I even entertain myself doing them, I liked the practice, plus activity 5 since It was where I had some doubts but I was able to solve them.

I could learn a lot from this practice, and I really like doing practices like these.
